

## SURVEY ON EXISTING CHILDREN'S PERFORMANCE OUTCOME SYSTE

Legislation requires that counties report performance outcome data to the California Department of Mental Health (DMH) that meets the domain requirements specified by the California Mental Health Planning Council (CMHPC). The existing Children's Performance Outcome System includes the Child & Adolscent Functional Assessment Scal (CAFAS), the Child Behavior Checklist (CBCL), the Youth Self-Report (YSR), the Client Living Environment Pro (CLEP), and the Customer Satisfaction Questionnaire (CSQ-8). As the current children's system was implemented, many individuals raised concerns that it would be too labor intensive, costly, and not provide the kind of informatio that was either desired or useful for outcomes. As a result, the DMH, California Mental Health Director's Associat and CMHPC agreed to evaluate the existing system during a two-year period and, if a more acceptable alternative c be found, evolve toward that system in a way that would not disrupt county services. This survey is designed to ful part of that commitment. Please provide your feedback by completing the information requested below.

Please identify your current affiliation with the children's mental health syste

Respondent Type: □ Chi (select one) □ Info	☐ Mental Health Director ☐ Children's Coordinator/Administrator ☐ Children's Evaluator/Quality Manager ☐ Information Technology			□ Pa □ Co □ Ot	☐ Children's Clinician ☐ Parent's Group Representative ☐ Consumer Advocate ☐ Other (please describe):			
	1	Very Dissatisfied	Somewhat Dissatisfied	Neutral	Somewhat Satisfied	Very Satisfied	No Opinion/ Don't Know	
Ease of Administrati	on							
- time to complete the f	orm	0	0	0	0	0	0	
- how easy to read & ur	nderstand	0	0		0	0	0	
Value of the Data Co	ollected

Other Important Issu	ies							
- culturally neutral/non	biased	0	0	$\circ$	$\circ$	0	0	
- strength based		0	0	0	0	0	0	
- suitability for target p	opulation	1 ()	0	0	0	0	0	
- long-term use of this	system	0	$\circ$	0	0	0	0	

Target Population = All children receiving county mental health services 60-days or longer.

Includes multiple informants (parent, youth, clinician	Applicability of data to multiple agencies			
Psychometric validity and reliability	Includes collection of risk factors			
Short and relatively easy to administer	Applicability to broad age range of youth			
Low Cost (public domain is preferred)	Usefulness of data for quality management purp			
Cost effectiveness of data gathered (value of data per time & cost)	Flexibility to reformat instrument and to integrate with technology			
Sensitivity to measuring change over time	Usefulness of data for clinical treatment planning purposes			
Strength based design	Other #1 (describe):			
nethodological process is used (including pilot tests) to exa ys do you feel that the current Children's Performance Out	nine and identify alternative instruments, in wha come System should be changed/modified?
